

Senior engineering capacity, under your agency's name

Three recent builds that show how agencies use us: your client, your Slack and repos, our hands.

100%

job success

5+ yrs

shipping production apps

1. Standing Next.js developer across a team's client projects

Setup: embedded as their regular Next.js + Tailwind developer, working from their tickets across several projects.

Volume: 120+ hours over 8 months, plus side builds: calendar automation from parsed emails, booking API cleanup, a property-management app.

Why it matters to you: this is the white-label model. Their client relationship, our hands, steady weekly delivery.

2. Angular + .NET features dropped into an existing SaaS codebase

Setup: joined a live Angular + .NET codebase, wired APIs into a Figma-designed feature, then shipped follow-up fixes.

Turnaround: three back-to-back engagements, each closed in 2 to 4 days.

Client: *"One of the smoothest development collaborations we've had."*

3. AI sourcing agent, rescued and rebuilt

Setup: a half-built automation (n8n, OpenAI, Apify, Google Sheets) the client had given up on.

Outcome: rebuilt into a working sourcing agent; the client stayed on for ongoing work.

Client: *"I gave up at one point but Usama didn't."*

Another client running a series of biosignal simulators calls us *"our fixed guy for all our projects."*

How we'd start with you

1. You send one scoped ticket from your backlog.
2. We deliver it as a paid trial (under 15 hours) in your repo, under your name. Not happy, you don't pay.
3. If it works, a monthly block: 40 hours (about \$1,400) or 80 hours (about \$2,600). You bill your client your own rate.

Stack: Next.js, React, Node, TypeScript, Angular, .NET, Python, Shopify, WordPress, AI integrations (Claude, OpenAI, LangGraph, RAG).
